

Software Developer (m/f) for JAVA programming with a focus on "measurement technology"

This role can be based in Preston or Hamburg.

We are a company located in the centre of Hamburg and specializing in the development and sale of radiation measuring devices. As a newly founded subsidiary of the British James Fisher & Sons Group, we need reinforcement for our software development.

- Are you a JAVA developer with experience in technical informatics?
- Do you enjoy working independently and innovatively?

Then we should get to know each other!

We mainly use the following technologies:

- embedded software development: Java, C
- web-based software development: Java-EE
- TCP/IP, SQL, Swing
- Development tools: Eclipse, GIT, Wiki, Bugtracker

You should bring:

- Experience in the design of software architectures and GUI programming
- Enjoying independent, innovative work.
- Self-taught skills in unfamiliar tools and technologies
- Good English skills. Knowledge of German language could be an advantage
- Basic knowledge of physical measuring techniques (alpha / beta / gamma radiation)
- Interest in professional and personal development

We offer you:

- An employment contract of your choice: permanent, full / part-time, limited /open-ended
- Dynamic environment with many creative possibilities
- Start-up feeling with opportunities of a corporate group

A change of residence is not necessarily needed

If we have aroused your interest, please send a short application together with your salary expectations by e-mail to l.mason@james-fisher.co.uk
